Introduction

X-ray Trainer Oy is a medium sized company. They develop various type of software for x-ray machine. Their main goal is to provide safety and secure identification by the x-ray devices. As I am living in pori, I was trying to get internship in my living place and finally I was able to get the place for work placement. From17.05.2021 to 09.07.2021, I worked as a UIX designer there. There were 4 employees in total.

Description

My duties was to understand the problem and implement the solution accordingly their suggestion or advice. I used their HTML, CSS, JavaScript and jQuery. Firstly, They used to provide me the web page mockup design, then I convert it into a wireframe of a site. If everything was fine, then finally I would make the design for the site.

Learning

I learned so many practical issues, some advanced HTML elements and attributes uses learned very efficiently. In CSS, I learned grid, flexbox, responsive and parallax as well. I learned uses of JavaScript, for example how to get input and make it functional calculation, event handler , arrow function, spread operator, Destructuring, class and object. Though almost everything is object in JavaScript. I also learned json and sending all data to sever through http request.

Ongoing Considerations

In the two months with x-ray trainer oy, I feel I was able to learn as much as I could. However, I would like to learn more about the UIX design, including how to make mockup design and how to handle the server side.

This internship experience was important in building my frontend skills. I am grateful to have had the opportunity to get practical experience.
